Description of Products/Services:

Volumetric Clearance Services: IMPACT Services' low cost proprietary method for waste processing (Bulk Survey for Release) enables waste generators to reduce the volumes of their low-level radioactive wastes and dispose of low specific activity candidate materials as solid waste. Radioactive Decontamination Services: IMPACT Services removes radioactive contamination from a wide variety of equipment and containers. We provide a certificate of unconditional release for beneficial reuse and/or reduced disposal costs for materials that were formerly contaminated.

Waste Stream Inspection and Processing Services:

IMPACT removes nonconforming items in waste streams and ensures waste generators that their waste can be disposed of as efficiently and economically as possible and in conformance with the governing waste acceptance criteria.

Additionally, we are one of two radioactive waste processors in the nation licensed to use the patented OREX™ process on polyvinyl alcohol based disposable garments. This process enables the residues from contaminated garments to amenable for dissolution and filtration, virtually eliminating disposal volume.

The Pyrolytic-Destructor™ was developed as an alternative to incineration. The US EPA has approved the pyrolysis system for its ability to provide thermal reduction in a more controlled and environmentally conscious capacity. The controlled process of pyrolysis is an ideal method for the reduction of volume in low level radioactive waste materials.
